

Artificial Intelligence and Machine Learning Fundamentals

This introductory course offers a comprehensive foundation in Artificial Intelligence (AI) and Machine Learning (ML), providing essential knowledge and practical skills applicable across various domains. Through structured modules, participants will gain insights into the fundamentals of AI and ML, learn Python programming for data analysis, delve into machine learning algorithms, and explore the basics of deep learning.

Total Course Duration (hrs)
5

COURSE OVERVIEW

Artificial Intelligence and Machine Learning Fundamentals

Unit	Duration
Module 1 Introduction to AI & ML	00:08:04
1.1 Introduction To Artificial Intelligence	
1.2 Different Types of Intelligence	
1.3 Introduction To Machine Learning	
1.4 Types of Machine Learning	
1.5 Applications of AI & ML	

Unit	Duration

Artificial Intelligence and Machine learning Fundamentals

LEARNING OUTCOMES

- Explain fundamental concepts of Artificial Intelligence and Machine Learning, including different types of AI and supervised vs. unsupervised learning.
- Apply Python programming skills to manipulate data, perform exploratory data analysis, and visualize data using relevant libraries.
- Implement common machine learning algorithms for supervised and unsupervised learning tasks and evaluate model performance using appropriate metrics.
- Understand the basics of deep learning, including artificial neural networks and deep learning frameworks like TensorFlow and PyTorch.
- Develop and deploy AI and ML solutions for real-world problems, considering ethical implications and future trends in the field.

Prerequisite

Just Your Mindset !

- Open mind
- Don't let the terms and jargons stand in your way
- Take It As A Journey
- Fail fast, try harder
- Never stop yourself to ask 'why' at any or every point of learning
- Divide & Conquer
- Be curious and research
- Think of A Project and Look Forward To Making It Happen
